## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 and 3-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over MacGillivray U.S. Patent 4,275,686.

MacGillivray teaches a horse exerciser drive mechanism which is structurally similar to the Applicant's claimed apparatus. The device includes a motor or drive mechanism 3, a controller or speed control switch 16 and an animal sensing mechanism or human that detects an animal and determines whether the animal is of a first or second type. A human can manipulate the switch to vary the motor speed. Regarding claims 3 and 4, MacGillivray does not specify revolutions per minute as claimed. However, in column 4, last two paragraphs, by adjusting nut 29, the total speed reduction ratio can be infinitely adjustable. Further, one of ordinary skill in the art at the time the invention was made can vary the revolutions per minute to various speeds, even speeds as claimed, depending on the animal being trained. In regards to claim 5, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to use the device to exercise a variety of animals not just horses. As for claim 6, MacGillivray does not discuss the use of a wireless interface coupled to the controller. However, it would have been obvious to a person of ordinary skill in the art at the time the invention

Art Unit: 3643

was made to modify the wiring apparatus of MacGillivray with a wireless interface, in order to control the speed from a distance instead of stopping the device each time the speed needed to be adjusted.

***Response to Arguments***

With regard to Applicant's comments "the examiner never stated why.....to incorporate the function of the human into an apparatus" is considered, however, the human operator is an integral part of the apparatus to MacGillivray, in that, the human determines how the device will be used by horses varying widely in size, condition, temperament and training. In that, the human operator would not want to quickly exercise a horse which is injured. The operator would set the appropriate speed according to the animal's needs. The motivation as demanded by the Applicant is readily apparent in the Summary of the Invention of MacGillivray. With regard to the second argument, "a human varying the motor speed in MacGillivray does not read on an apparatus that automatically changes the speed" is more specific than the actual claim language. In that, the term "automatically" is not claimed.

***Response to Amendment***

Applicant's arguments filed 02-07-2005 have been fully considered but they are not persuasive.

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within

Art Unit: 3643

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

***Allowable Subject Matter***

Claim 2 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

Summary: Claims 1 and 3-6 are rejected.
